Information Protection

Secure all your data with custom access control lists, and permission sets through Azure Information Protection.

Data Classification

Classify your data to make securing files a breeze. Information Protection policies can be automatically attached to your data so you know instantly if it's Public, Personal, Classified, or Top-Secret.

Data Loss Prevention

Does your company need to comply business standards and industry regulations for protecting sensitive information? We can assist in setting up Data Loss Protection policies that prevent leakage of sensitive information outside your company.

eDiscovery

The eDiscovery process often represents 30% of the total cost of litigation. Companies that fail to produce emails/records in a timely matter can risk paying millions in sanctions and fines. We can assist in implementing an eDiscovery solution that supports the long-term viability of your organization.

Data Auditing

Using Cloud App Security, we craft solutions that allow administrators to log auditing information, and automatically remediate any malicious behavior that puts your environment at risk.
