WHO IS SKYNORTH?

SkyNorth Software is a Microsoft Cloud Solutions Provider focused on enterprise level implementations and migrations that will help your company create a Cloud First IT Infrastructure.   Our premium resources are comprised of architects, developers, and engineers known for their extensive knowledge, speed, and agility. Each has at minimum 10 years' experience training and supporting top fortune 500 companies. This enables us to deliver much faster, and produce a higher quality result than can be expected from our competitors.

Our commitment to you, is to fully understand your requirements, challenges, dependencies, and business needs during planning phases which helps to keep overall project costs low.

Deployment

We will help determine your O365 deployment goals with key stakeholders from inception to completion. Defining a scope and timeline is critical to business success, and is a key factor in our Deployment offering.

Migration

If you have existing on-premises Office infrastructure, we will help create a migration strategy that works for you to ensure a smooth cloud transition.

Governance

Is your data footprint growing too fast, or spread out throughout different toolsets and repositories? We can help you define and implement a standardized set of data governance policies for O365.

Security

Office 365 has many different features to help with securing your data, and user identities. We will help deploy these technologies to make sure your data is safe for any conditions.

Support

Are you tired of waiting for a callback, or dealing with the Tier1 Team? We have resources that came directly from Microsoft Escalations that can help solve the most difficult support issues.

Training

Delivered on-site or remote, our custom training material will help any level of end-user or SharePoint Admin.
